FLAWLESS PROJECTION SURFACE —

**SEAMLESS  
SOLUTIONS**

## The NanoSeam Difference

NanoSeam is engineered to provide the most seamless projection surface possible. Whether under cove lighting or projection, a NanoSeam screen will appear free of shadows and imperfections that detract from the guest experience.

- Panels installed with no overlapped, folded, or crimped seams
- Panels attach to the frame with color-matched rivets that install flush to the surface

## Experience & Expertise

The consistent quality of NanoSeam is built on decades of experience. We boast the world's most skilled engineering, manufacturing, and installation teams. Their strict attention to detail results in superior optical performance, dome acoustics, structural strength, and tighter tolerances compared to other dome manufacturers.

## Repaneling Possibilities

Regardless of diameter, elevation dimensions, or tilt, a NanoSeam repanel can provide the same exceptional seamless projection surface as a new build, with both lower costs and a faster installation timeline.

Most existing dome support framing can be used as the foundation for a NanoSeam repanel project, whether the original dome was built by Spitz or another manufacturer.

## The World Chooses NanoSeam

NanoSeam domes and screens are the finest projection surfaces available. More than 250 NanoSeam installations are found in science centers, museums, theme parks, and attractions throughout the world.

Our discerning customers include:

**Adler Planetarium**  
**Shanghai Astronomy Museum**  
**California Academy of Sciences**  
**Stiftung Planetarium Berlin**  
**United States Naval Academy**  
**Buhl Planetarium**  
**Colgate University**  
**Planetario de Bogotà**  
**Planetarium Münster**  
**American Museum of Natural History**  
**St. Louis Science Center OMNIMAX**

**Liberty Science Center**  
**Phitsanulok Science Central**  
**Planetario Lunaria**  
**Planetario Orizaba**  
**Città Della Scienza**  
**Tekniska Museet (Stockholm)**  
**Guangdong Science Center**  
**U.S. Space & Rocket Center**  
**Frost Museum of Science**  
**And Many More**

## Durability & Reliability

Our panels are electrostatically powder-coated to produce the most uniform projection surface - one that does not require on-site painting that can introduce imperfections into the coating. Panel surfaces are incredibly durable and will not degrade over time, and facilitate easy cleaning and maintenance.

## World-Class Design

NanoSeam support structures are designed to be low-profile and require less space behind the projection surface for installation than competing designs. Our domes and screens exceed the most demanding structural and seismic stability standards.

- Standard dome sizes ranges from 6 meters (20 ft) to more than 30 meters (100 ft) in diameter
- Custom size and shape designs available after consultation with the Engineering Design team
