

THE UNIVERSE AT YOUR FINGERTIPS

# Training & Professional Development

**DIGISTAR 7**

## Training

Our training opportunities give you the tools that help you build your comfort and competency in Digistar. Providing a solid foundation for utilizing the system, our training opportunities include a five-session online introductory class, onsite training sessions at our Utah and Pennsylvania campuses, and the option to hold an in-person training at your own facility.

We also host live webinars twice per month, taught by our team of engineers and Digistar experts. The webinars are available to all Digistar customers, both live and as recordings on the E&S support portal.

## Professional Development

An invaluable advantage of a Digistar Planetarium includes being part of the world's largest and most active dome community.

Each year, we host Summer Institute at our Chadds Ford, PA campus to deliver informative and hands-on sessions that provide a deeper understanding of your planetarium's capabilities. Reflecting our rich history of driving and powering next-generation learning environments across the globe, sessions are led by E&S and Spitz, Inc. experts and offer diverse instruction for users of all experience levels. Presenting new and exciting perspectives for enhancing curriculum and audience engagement in your planetarium, Summer Institute empowers attendees to develop and access inspiring and educational content that propels learning to new heights.

We have closely collaborated with the customer-run Digistar Users Group (DUG) since its inception more than four decades ago. DUG provides unique professional development and collaboration opportunities for our global network of Digistar users, including the annual DUG meeting hosted at a different Digistar site each year. New Digistar sites additionally receive a complimentary year of membership for easy exchange of production techniques, planetarium operations, content sharing, and more.
